BigRio Receives Dept of Defense JAIC DRAID Contract!

Cambridge, MA - Cambridge-based digital technology consulting firm BigRio is happy to announce that it has been awarded a Department of Defense (DOD) Joint Artificial Intelligence Center (JAIC) Data Readiness for Artificial Intelligence Development (DRAID) Services Basic Ordering Agreement (BOA) to accelerate AI adoption across the Defense Department.

With the award of the contract, BigRio joins a number of other high-profile IT companies that are focused on providing advanced AI solutions to the DOD. The five-year, multi-award contract has a \$241M ceiling.

The creation of DRAID represents DoD's understanding of how vital AI is to the nation's current and future security. Since establishing the JAIC in 2018, the agency has been running full throttle in incorporating AI into existing systems as well as finding ways to create new and unique AI-driven solutions for military and intelligence applications. BigRio particularly excels in adapting legacy technologies to AI applications, as well as being an innovator and incubator for novel AI and machine learning solutions.

"BigRio delivers world-class custom software solutions across all modern programming languages and platforms. Our development teams thrive on designing and implementing enterprise, web, and mobile applications. We have deep experience with high-performance, highly-available systems. We are excited to now be able to provide our level of expertise in Big Data, AI, and machine learning to the Department of Defense and JAIC's mission," said Rohit Mahajan, Managing Partner of BigRio.

With extensive domain knowledge, BigRio's scientists and engineers design and build best-in-class solutions across a variety of industries and applications. This diverse exposure and our constant run-in with cutting-edge technology give us invaluable tools, strategies, and techniques in support of DoD's mission. Our knowledge and horsepower bring innovative, cost-conscious, and proven results to complex AI integration challenges such as those presented by DRAID, and we look forward to working with the DoD on its modernization efforts.
